

IT SOLUTIONS

All of our solutions are customised to address your business-impacting IT weak spots. From secure data storage to prioritising and enhancing network and application performance, we work to make IT a business enabler, helping to free your skilled IT resources from daily troubleshooting so that they can be better deployed on strategic IT projects.

Data Center

Data is an essential part of doing business today; and the housing – hosted computer environments in data centers (DC) - of that mission-critical information must therefore be performed to the highest standards of security, integrity and functionality. GMS has the expertise to provide complete, advanced solutions for building International DCs that facilitate high value-added web hosting and managed services such as internet security, load balancing, dedicated bandwidth, content delivery, performance monitoring and managed security, in addition to simply providing space and bandwidth in its basic co-location service.

Internet Backbone & Access

Whether carrying voice, video or data across the country, region or the globe, a strong, reliable, secure foundation is essential to your business' information and communications flow. Our solutions use high-performance technologies for Internet backbone and high-density remote access. We offer the unsurpassed capacity and reliability of advanced IP-centric infrastructures, as well as ATM, Frame Relay, Gigabit Ethernet, xDSL and Optical Network infrastructure to meet your connectivity needs.

Applications Acceleration

We use best-of-breed innovative products and services in our Applications Acceleration solutions to enhance your Internet

infrastructure and form a stable and secure platform over which your on-demand applications can perform more effectively. We ensure highly demanded applications and services are available through advanced server load balancing, acceleration, content routing and switching, SSL acceleration and global content distribution technologies.

Application-enabled & Traffic Management

The demands we place on applications such as email or accounting software can change by the time of day or at certain periods in the quarter, for example. The performance of networked applications and related services like these are critical for business. Our Application-enabled and Traffic Management solutions give you visibility and control over these key applications and thus safeguard performance by assessing and classifying applications, and analysing their performance. They will also enforce policy-based bandwidth allocation and generate reports on the results so that you no longer have to leave application management to chance.
